MSc Environmental Data Science and Machine Learning student at Imperial College London, with a strong background in applied mathematics, machine learning, and industrial AI research. Interested in developing robust data-driven solutions for energy systems and environmental applications.

EDUCATION

Imperial College London - MSc Environmental Data Science and Machine Learning

2025 – 2026

London, United Kingdom

- Modules: Machine Learning, Deep Learning, Environmental Data, Big Data Analytics, Optimization.
- Led an 8-person team to develop a deep learning pipeline for lightning strike prediction using satellite imagery, ranked among the top 3 projects in the cohort.

Ecole Centrale de Nantes - Applied Mathematics and Data Science Diploma

2021 – 2025

Nantes, France

- 3 years engineering diploma equivalent to a Master's Degree.
- 3rd year modules: fundamental mathematics, machine learning, data analysis, probability, Bayesian statistics.
- 2nd year modules: renewable energies (wind, solar and hydraulic), electrical grid, energy transition.
- Data Challenge: prediction of passenger traffic in the Paris metro network.
- Research Project: dimensionality reduction methods (K-PCA, UMAP, t-SNE).

Preparatory Classes (CPGE)

2019 – 2021

Lycée Lakanal, France

- Two-year intensive undergraduate program in mathematics and physics preparing for the highly competitive nationwide entrance examinations to French *Grandes Écoles*.
- GPA - 3.9/4.0

RELATED EXPERIENCE

Research Internship (ongoing) - Revax (early-stage legal tech startup)

May 2026 – August 2026

London, United Kingdom

- Optimizing a Retrieval-Augmented Generation (RAG) pipeline built on legal knowledge graphs through LLM distillation and quantization techniques to reduce inference latency and cost.

Research Internship - EDF R&D

April 2025 – Sept 2025

Palaiseau, France

- Diminished by 30% the day-ahead electricity price prediction residuals for EDF Trading.
- Developed machine learning models to forecast cross-border electricity exchange capacities across Europe.

Engineering Internship - EDF Renewables

April 2023 – August 2023

Paris, France

- Gathered and formalized operational knowledge (inter-array cable maintenance, turbine component replacements) through interviews with internal teams and external coordinators, within the Marine Installation & Operations department (offshore wind).
- Produced inspection reports for the 80 foundations of the Saint-Nazaire wind farm, used for maintenance tracking.

PERSONAL PROJECTS

AI-powered fact-checking and political analysis platform (ongoing)

January 2026 – present

London, United Kingdom

- Designed and implemented an agentic workflow using LangGraph, integrating web scraping and speech-to-text pipelines to generate sourced political analysis articles (demo: [Critical](#)).

Mobile App Full-stack Development - Gap year project

Sept 2023 – August 2024

Paris, France

- Designed and developed a fashion-focused social network application ([Weav](#)), reaching more than 10,000 users.
- Built the front-end in React Native and the back-end in Node.js, with a MongoDB database.

SKILLS AND INTERESTS

Coding Skills

- Python: most proficient language (scikit-learn, PyTorch, pandas, LangGraph, matplotlib, seaborn).
- JavaScript & React Native: full-stack mobile application development.
- Tools: Git, Docker, Bash
- Data: SQL, Neo4j (Cypher)

Languages

- French - native
- English - fluent (TOEFL 109/120, TOEIC 970/990)
- German - academic level

Interests

- Guitar (13 years of practice), Bouldering (6 years of practice), Chess, Fashion, Hiking.
